

## **Childhood Vaccine Injuries - 2 month old Brooks Ryker State died suddenly 4 days after vaccination**

**Brooks was 42 days old and weighed just 8 lbs. 4 oz. when doctors thought it'd be a good idea to give him his full set of 2 month shots on October 15th. 4 hours post shots and Brooks had visible swelling in his face. On October 19th, Brooks tragically and unexpectedly passed away at his home.**

**Autopsy has showed obvious swelling of the brain and heart.**

**The family has retained a VICP lawyer and are obtaining a secondary study of Brooks' tissues. They are fighting for the truth to be known. Inoculations took Brooks' sweet life.**

**Please hold this family in your prayers and show them positive support.**

**Rest in Peace, Brooks Ryker State.**

**Your name and memory will be known, and you are so loved.**

Today was difficult for us. Jeremy and I have come to peace with you becoming our angel, but we also know that giving you vaccines contributed to your passing. You were too small and it was too much too soon. To all new parents, be cautious of what you put into your babies.
