Dr. Makis –

I am a follower of yours on X and have replied one of your tweets.

My 77 year old dad was diagnosed with Stage 4 Pancreatic Cancer on January 29, 2024. CA19 was 23,010 and his liver looked like Swiss cheese because of all the lesions Two largest lesion measured 3.6 cm and 2.4 CM. On February 29, 2025, his CA19 was 44,960 and he started chemo Feferinox regiment for 8 sessions and been on the chemo pill since.

Same week February 2024, started with (we did not consult or advise oncologist):

Fenbendazol
Mebendazole
Metformin
Lovastatin
Berberine

By May of 2024 his CA19.9 dropped to 231 and as of March 2025 it is at 21. **This is a 99.95% drop in CA19 levels** (screen shot attached). Small lesions on his liver are gone and the two largest shrunk from 3.6 cm to 2.4 cm and 2.4 cm to 1.2 cm. His Doctors are amazed. He has told them what he is and has done since day 1 of treatment. His main oncologist told him in 35 years he does not remember a person with results like this. He went as far as calling the results a miracle.

Just last week we added Ivermectin to his list of “medicines”, we are going to beat this disease.....

Dr. Makis, you have saved countless lives with you message, you are the epitome of what health care should be.

Thank you -

My Take...

The dosing regimen was:

- 1000mg Mebendazole in the morning
- 888mg Fenbendazole in the afternoon
- 40mg Lovastatin in the morning
- 250mg Metformin BID
- 40mg Ivermectin BID, added recently in Feb.2025

RESULTS:

- CA19-9 from 44960 to 21
- small liver lesions resolved
