We don't know each other but I just wanted to truly thank you for what you are doing. Because of your research and post around cancer and ivermectin I am proud to report that my wife just had the best checkup she's ever had. Cyst on her liver that has not gone away since they found it and the two masses in her lungs that although have no more cancer activity have still yet to shrink. Both of these things doctors have said will probably be there forever and that is OK. However, after taking ivermectin, both of the masses have shrunk considerably, and her cyst on her liver is almost gone. This is also the first time she's had perfect blood work with her liver enzymes, not being out of whack since going through immunotherapy.

Keep doing what you're doing, and I wish more doctors would follow your lead rather than allowing big Pharma the cloud their judgment on what's best for us humans.

I wish you and your family nothing but the best happy holiday holidays!

Thu 11:50 AM

You accepted the request

Wonderful! Very happy to hear this, I'm glad she had an excellent response.

Hi [REDACTED]! What was your wife's primary cancer and stage? All the best. William

3:18 AM

Melanoma. She had a mole on her neck 7 years ago that they thought cleared margins. Fast forward to 2 years ago and she caught Covid, and coughed up blood so went in for scan and found two large masses in her lungs. Stage 4 and did immunotherapy. Killed the cancer but caused so many other issues.

3:21 AM

That's incredible (the improvement of the lesions with Ivermectin)

4:10 AM • Sent

My Take...

Melanoma is a difficult cancer to deal with.

This was a Stage 4 Melanoma patient, a young woman.

It's amazing that her metastatic lesions responded to Ivermectin, beyond what immunotherapy was able to do and her lung and liver lesions shrunk significant

We have only begun to scratch the surface of our understanding of Cancer Treatment (and Ivermectin in this case).

I was literally just thrown out of the doctor's office today! In Denmark. For not agreeing on how Vit. D is adequate, having asked for a blood test - and... for asking for a prescription for Ivermectin then she had already started to shut down completely, and I didn't even get to show her some I had just printed and looked forward to talk to her about, before she got up and opened the door. 'The trust had been broken', she said, to which I replied that she was the one who had broken it. I've been completely shocked and 'baffled' 😞 I consider it malpractice, but at least now I know I stand. She is the one who has lost her way, while I'm more and more finding mine with the help of REAL doctors! (A doctor is called 'læge' in Danish which means to heal = healer). Somewhere down the line I think she knows that.

Nabil Nabil 12. dec.

Curious to know how much IVM she took, or if she followed a specific protocol. Inspiring story, nonetheless.
