Hello William,

Happy Sabbath! My name is [REDACTED] and I am from Argentina. I want to express my deepest gratitude for your work. May God bless and protect you always.

I have witnessed the benefits of using ivermectin and fenbendazole. My father is very ill; he is bedridden and weak at 84 years old, and he may have colon cancer. He has received the Covid vaccine five times. Refuses to go to the hospital because he is so weak and is essentially on his deathbed.

I gave him 500 mg of fenbendazole once, along with a very low dose of 12 mg of ivermectin, and he showed significant improvement. I would greatly appreciate any suggestions for dosing.

Please continue your important work; you are making a difference.

Thank you.

My Take...

I am sharing this because it is a reminder that even in the most dire situations, you can have a significant impact on someone's quality of life.

Don't underestimate the impact that Ivermectin and Fenbendazole can have, even in the short term.

I will contrast this with a tragic story I had today.

A man tried to get a Cancer Consultation (with me) for his good friend who was suffering from Cancer, as a gift. Here is what happened.

Hi [REDACTED],

We appreciate your good intentions with getting Dad alternative care. However, we discussed this and the two medications with his team and they were highly concerned about the side effects. One of them is actually supposed to be for animals (not humans) and the other they feel would likely lead to death as the side effects would be too harsh for him.

His consent form says to discuss with your doctor first so we did and do not feel like this is a good plan of action.

Again, we appreciate your concern and thoughtfulness but this isn't a course we feel is in dad's best interest.

The Oncologists lied to the family about Ivermectin and Fenbendazole, and the family trusted the Oncologists who unethically deprived their Dad of a real chance at beating Cancer.

It broke my heart.

Anne Clifton Outside of the Camp 13. dec.

What is astounding to me is the assertion that one of the medications is for animals, not humans. Oncologists don't know better than this?
