## **My Take...**

**Stage 4 Prostate Cancer patient:**

**Started Ivermectin 1mg/kg and Fenbendazole 1000mg 3 days on 4 days off.**

**In 12 days PSA drops 1533 to 968 (37% drop). Abdominal cancer lymph nodes have disappeared.**

**To be honest, that's a lot of cancer cell killing over a very short period of time.**

**That will cause a great deal of FATIGUE. That's to be expected.**

**Bone pain? Also. As cancer cells in bone get killed, the inflammation can also cause bone pain.**

**These go away with time.**

**Incredible response? Absolutely. This gentleman is on his way to becoming cancer free.**
